

CUSTOM STRUCTURAL RACK SOLUTIONS

CUSTOM STRUCTURAL RACK & PLANT INTEGRATION

Steel support, without constraints.
Coordination that keeps every trade moving.

Engineered modular rack & platform systems for cable tray, busway, process piping, MEP, and rooftop equipment — plus multi-trade integration and commissioning readiness packages designed alongside your EPC, fabricated in-house, and delivered ready for erection. Structural support, MEP engineering, integration, and commissioning handoff are peer capabilities AAS offers.

FACTORY-DIRECT

DELIVERED STEEL STRUCTURES

23+

YEARS

We Don't Sell Steel. We Solve Problems.

Across mission-critical data centers, battery & EV plants, petrochemical facilities, pharma & food, logistics, and industrial campuses — one team engineers the support, coordinates the interfaces, fabricates factory-direct, and packages commissioning readiness for a clean handoff.

PURPOSE-DRIVEN ENGINEERING

We engineer around your specific routing, loads, and seismic envelope. Every rack is a custom solution — sized to process equipment, utility density, and access.

DEDICATED PROJECT TEAM

One point of contact from design to delivery. No handoffs, no dropped details between structural support, MEP engineering, integration, and commissioning readiness.

FACTORY-DIRECT CONTROL

In-house fabrication means no subcontractor gaps. Your finish, your schedule, your sequence, delivered. Coil-to-form-to-finish capability behind every shipment.

REAL-TIME VISIBILITY

Live fabrication tracking with scheduled shipments tied to your crane plan and erection sequence. *Select projects.

PEER CAPABILITIES

Structural rack & platforms · MEP support · Full MEP engineering · Multi-trade integration · Commissioning handoff / readiness packages

Model exchange via IFC / Revit / BIM 360 keeps EPC, trades, and OEMs on one geometry from design through sequenced delivery and commissioning readiness.

One Scope Map. Peer Capabilities.

AAS offers structural rack & platforms, MEP support, full MEP engineering, multi-trade integration, and commissioning readiness as peer capabilities — coordinated with your EPC and trade partners.

STRUCTURAL

Rack & platforms

RK-MAS · RK-MEP · RK-CUDR · Field-bolted, crane-sequenced assemblies with OSHA access provisions.

MEP support

Cable tray, busway, conduit, process piping · AHU / pump / HX platforms · Vibration & access framing.

MEP ENGINEERING

Full M/E/P scope

Mechanical, electrical, plumbing / process utilities — design packages, coordinated models, and stamped deliverables where applicable.

Stamped drawings per project jurisdiction where applicable.

INTEGRATION (RK-INT)

BIM clash awareness · Utility envelopes · Equipment interfaces · Sequenced delivery · Model exchange via IFC / Revit / BIM 360.

COMMISSIONING

Handoff / readiness

Install-sequence docs, utilities punch lists, and FAT/SAT mindset packages for a punchable turnover.

Licensed controls / safety-circuit EOR remains with the designated authority unless separately contracted.

Coordinate alongside your EPC / GC, designated MEP or process EOR (when not in AAS scope), controls / automation vendors, and equipment OEMs.

MARKETS Mission-critical data centers · Battery & EV · Petrochem & refining · Industrial campuses · Pharma & food · Logistics · Manufacturing cells with conveyance

PRODUCT 01 / RK-MAS

Modular Aisle Structure for MEP support.

Engineered steel framing for electrical, mechanical, and plumbing services — configured around your routing, scaled bay by bay, and built to install fast.

BEST FOR	Cable tray networks · Busway systems · Electrical conduit · Process & mechanical piping · Hot/cold aisle containment
CONFIGURATION	Hot/cold aisle, multi-tier, single or double-stack. Modular bay spacing, scalable for future expansion without re-engineering primary steel.
FINISHES	Powder coating · Epoxy polyurethane · Hot-dip galvanized · Primed · Custom colors on request
CODES	Designed to applicable local seismic and building codes for your project jurisdiction.

RK-MAS frames ship with clearances and attachment zones coordinated for multi-trade hangers, busway, and process lines — so MEP contractors pull wire and set pipe into a known geometry. AAS MEP engineering can own design packages in the same coordinated flow.

Future-flexible. Add bays or tiers without re-engineering primary steel.	Coordinated routing. Model exchange via IFC / Revit / SOLIDWORKS / BIM 360.	Fast erection. Shop-fabricated assemblies, sequenced for the field.	Brand-matched. Factory finish coat in your color — no field paint.

CABLE TRAY · BUSWAY · CONDUIT
HOT / COLD AISLE
CUSTOMIZABLE · MODULAR · SCALABLE

TYPICAL APPLICATIONS
Data centers · Process plants · Battery / EV · Pharma & food · Logistics

PRODUCT FAMILY

MECHANICAL · ELECTRICAL · PLUMBING PLATFORMS

PRODUCT 02 / RK-MEP

Custom platforms for the heavy stuff.

AHU · PUMPS · HEAT EXCHANGERS
PROCESS EQUIPMENT · ELECTRICAL GEAR
FULLY CUSTOMIZABLE · PREFABRICATED

Steel platforms engineered for AHUs, pumps, heat exchangers, and process equipment — sized to your loads, prefabricated, and delivered ready for erection. Rooftop decks, chiller and pump skids, electrical gear platforms, and process modules.

DESIGNED FOR Equipment dead & live loads · Vibration & serviceability · Maintenance & access · Plumbing & process skids · Electrical gear & busway landing platforms

GEOMETRY Single or multi-level decks, custom plan dimensions, OSHA stairs/ladders/handrails, utility penetration zones and drip/containment framing.

FINISHES Powder coating · Epoxy polyurethane · HDG for outdoor / coastal · Primed · Custom colors

DELIVERY Prefabricated & field-bolted, minimal on-site welding, sequenced to crane schedule.

Platforms respect process loads, vibration criteria, and utility stubs — coordinated with OEM anchor patterns and your EPC crane plan. Structural geometry, MEP engineering, and commissioning readiness packages are designed as one coordinated flow.

TYPICAL APPLICATIONS
Rooftop AHU decks · Chiller skids · Pump platforms · Process modules · Electrical / switchgear platforms · Heat-exchanger decks

Vibration-tuned. Decking and bracing designed around equipment dynamics.	Inspection-ready. Engineered access for serviceability from day one.	Coastal-rated. HDG option for high-corrosion and marine environments.	Crane-coordinated. Erection sequence built around your lift plan.

PRODUCT 03 / RK-CUDR

Central Utility Distribution Rack.

HIGH LOAD CAPACITY
LONG SPAN
FULLY CUSTOMIZABLE

Long-span structural rack systems that organize, support, and route multi-trade utility networks across the site — preserving structural efficiency and giving every trade clear, serviceable corridors.

DESIGNED FOR	Span & load criteria · High piping & utility densities · Service zones · Integration with primary steel · Manufacturing cells with conveyance
CAPACITY	High-load, long-span configurations sized to equipment reactions, seismic envelope, and live loads — with expansion capacity reserved.
COORDINATION	Geometry tied to building columns; sequenced erection with primary structure. Multi-trade corridor allocation in BIM before steel hits the shop.
FINISHES	Powder coating · Epoxy polyurethane · Hot-dip galvanized · Primed · Custom colors

RK-CUDR geometry can be planned against facility utility envelopes — 480V paths, compressed air, exhaust / MUA, gas, and HVAC chases — so the steel corridor matches the plant’s utility story. AAS MEP engineering can own the utility design packages that feed those envelopes as a peer capability.

Clear utility corridors. Unobstructed routing for piping, cabling, and all trades.	Integration-first. Engineered with the building’s primary steel from day one.	Service zones. Designed-in maintenance access from concept through delivery.	Adaptable. Capacity reserved for future expansion of the utility envelope.
--	---	--	--

TYPICAL APPLICATIONS
Refining & petrochem · Battery & EV plants · Industrial campuses · Mission critical · Manufacturing / process cells

PRODUCT 04 / RK-INT

Integration that lands with the steel.

BIM · UTILITY ENVELOPES
EQUIPMENT INTERFACES
MEP ENGINEERING · COMMISSIONING

RK-INT is the coordination layer on top of RK-MAS, RK-MEP, and RK-CUDR. We engineer the structural support *and* package the interfaces so EPC, trades, OEMs, and controls teams share one geometry, one sequence, and one punchable commissioning handoff. Full MEP engineering sits in the same flow as a peer capability — design packages and coordinated models before fabrication.

DIAGRAM · RK-INT 6-STEP INTEGRATION FLOW

01 · BIM MULTI-TRADE

Model exchange via IFC / Revit / BIM 360; clash awareness for tray, pipe, busway, and structure; models aligned to erection sequence.

02 · UTILITY ENVELOPES

Corridor & platform geometry vs facility utilities — electrical paths, compressed air, exhaust, gas, HVAC / MUA — with owner MEP EOR or AAS MEP engineering.

03 · MEP ENGINEERING

Full mechanical, electrical, plumbing / process utilities — design packages & coordinated models. Stamped drawings per project jurisdiction where applicable.

04 · EQUIPMENT INTERFACES

Reactions, vibration, access, and conveyance clearances packaged for OEM and EPC use.

05 · COMMISSIONING HANDOFF

Install sequence, utilities punch lists, FAT/SAT mindset packages — readiness documentation; licensed PLC/HMI or safety-circuit EOR remains with designated controls authority unless separately

06 · SEQUENCED DELIVERY

Shop packages and ship sets tied to crane plans — factory-direct visibility from design through outbound.

From routing to erection. One team.

1

ROUTING IN

Send cable, pipe, busway, and equipment layouts (or BIM).

2

BIM / ENG

Structural support sized to loads & seismic; clash awareness.

3

MEP ENG

Full M/E/P packages as a peer capability; stamped drawings per project jurisdiction.

4

FABRICATE

Factory-direct, finish-matched, QC'd assemblies.

5

SHIP & ERECT

Sequenced loads ready for field bolting and crane lifts.

6

COMMISSION

Readiness packages, punch lists, and handoff docs for trades & commissioning teams.

FINISHES & COORDINATION

Powder · Epoxy
polyurethane · HDG ·
